Craig Grossman

Craig Thank you for your company's assistance addressing an ongoing issue at the Richmond City Hall and the Ice Level Hockey Facility. Our team at the City of Richmond was very impressed with your knowledge and product.

Allied Bioscience Services application of VireoShield TiO2 Surface Coating has provided exactly what these public spaces required; self-cleaning and continuously antiseptic surfaces. The coating virtually eliminated the offending odour and I am confident that it will reduce the transmission of surface borne bacteria and viruses for those utilizing the treated areas. The fact that this process is environmentally friendly and "green technology based" is just another positive for the City of Richmond.

Specifically, the application showed:

- Immediate results
- It is environmentally friendly
- It was not as harsh as typical cleaning chemicals (i.e. bleach chlorine) would be
- Virtually no down time
- Simplistic application process without inconvenience or disruption to the work areas
- Existing science verified and supported it

The City of Richmond has made numerous attempts to rectify the issue with no success. The fact that we tested your services without simultaneously performing other changes gives us confidence we can improve our indoor air quality.

Before the application of ABS VireoShield TiO2 Surface Coating our public users and staff registered numerous complaints regarding the odours and we have received none since.

I am impressed with your company and product, the results support the process. My team and I would like to take the next steps in planning how Allied Bioscience Services can help address other issues at various public venues.

Yours truly,

Gord Frederickson

Building Maintenance Coordinator
